

JFrame

ActionListener

Window< T extends Comparable< T >

```
graph BT; Window["Window< T extends Comparable< T >"] --> JFrame["JFrame"]; Window --> ActionListener["ActionListener"];
```

The diagram illustrates a generic class `Window< T extends Comparable< T >` at the bottom, which is the superclass. Two blue arrows point upwards from this class to `JFrame` and `ActionListener` boxes at the top, indicating that both `JFrame` and `ActionListener` inherit from or implement the `Window` class.
